# Heavy Duty Neutra-Shield

Rust Inhibitor and Neutralizer

## Why was Heavy Duty Neutra-Shield developed?

Stronger, more acidic resins and flame retardants have come into the plastics industry which the standard neutralizer was not strong enough and clients were experiencing corrosion even with protection.

- Destroys strong acid vapors on contact
- Superior corrosion and rust inhibitor
- Heavy duty acid vapor neutralizer
- One step (neutralizer and rust inhibitor)
- Displaces moisture
- Easy to remove

## Directions:

Be sure surface is clean so the neutralizer will be in direct contact with the surface of the metal. Clean off any resin or gas build-up with #102 On Line, #111 Extreme Resin Remover, or #205 Excel Mold Cleaner. Shake can well before using. Hold can 8"-10" away from surface. Spray an even coat on all surfaces requiring protection. To remove, simply flush with one of our degreasers.

## NPCA Hazardous Materials ID System

Health	2
Flammability	4
Reactivity	0
Other	See SDS
